### **DETAILED ACTION**

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action or the MPEP.

#### ***Election/Restrictions***

Applicant's election without traverse of claims 1-12 in the reply filed on October 7, 2004 is acknowledged. Claims 13-19 have been cancelled.

#### ***Claim Rejections - 35 USC § 102***

Claims 1, 3 and 5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Nilsson et al., US 6,132,405. Note that insert 18 may even comprise metal, and thus has a greater stiffness.

Claims 1, 3, 4, 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Bogue et al., US 4,270,535. Bogue discloses a distal end tapered portion 28, which anticipates the claimed stiffening insert, positioned in the distal tip portion. Although Bogue is not a peritoneal dialysis catheter, Bogue shows the claimed structural features. Further, the preamble is not accorded much patentable weight when the body of the claim is complete in itself. Regarding claim 1, claim 1 requires that the stiffening insert have a stiffness greater than the stiffness of the distal tip. While Bogue does not discuss the flexibilities of the tapered portion 28 and the catheter, the examiner takes the position that the tapered portion is inherently stiffer than the catheter due to its bulk and thickness. The tapered portion 28 has a thickness that is equivalent to the thickness of the outer lumen 16 of the Bogue catheter, and must be stiffer than the

Art Unit: 3762

thinner catheter sidewall 41. Bogue apertures 20 anticipate the claimed side openings.

The claimed first longitudinally extending lumen is anticipated by outer lumen 16.

***Claim Rejections - 35 USC § 103***

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nilsson '405 in view of Trudell et al., US 5,098,413, or Moncrief et al., US 5,057,075. Nilsson discloses a peritoneal dialysis catheter, however, Nilsson does not expressly disclose that the end is to be coiled. Trudell and Moncrief exemplify that peritoneal dialysis catheters commonly have coiled ends to improve the flow characteristics of the indwelling end. Accordingly, it would be obvious to one of ordinary skill in the art to make the Nilsson end coiled so that it has improved flow characteristics as shown by Trudell or Moncrief.

***Allowable Subject Matter***

Claims 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 9-12 are allowed.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note is made of the prior art cited in the attached PTO Form-892 and also the following prior art cited by applicant: Geary et al., US 4,950,259; Sharkawy, US 5,021,044; Markel, US 5,053,004; Martin et al., US 5,797,869; Mahurkar et al., US 5,221,255 and Labianca, US 4,769,016.
